Asset Visibility and Cyber Asset Attack Surface Management (CAASM)

Secure your organisation with CAASM solutions.
Get continuous asset visibility and cyber asset attack surface management with our CAASM capability.

The Benefits of CAASM & Asset Visibility

Total asset visibility, fully automated

Discover coverage gaps

Regulatory Compliance

Risk reduction & early threat detection

Cyber Asset Attack Surface Management is for organisations concerned with protecting their digital assets, networks and systems from cyber threats and attacks.

Total Asset Visibility - The No.1 Control of all Frameworks for Reduced Attack Surface & Strengthened Operational Resilience

Asset Inventory for the whole business

Our platform leverages automation to automatically scan your organisations infrastructure and with our low code, no code approach – once connected, we can be delivering tangible, actionable intelligence to you within a matter of a few hours.

Full Holistic Coverage: Automation is used to discover, categorise and analyse any device, apps, or other tech and provide you a bespoke report so that you obtain an accurate view of your threat landscape.

Assurance with a Live Asset Repository: View your assets in real time, eliminating that manual static viewpoint that does not reflect the true picture of your assets.

Fully Customisable: Our experts are able to customise the platform to the threat levels you need to understand. No two businesses are the same so levels of threat will vary depending on your technology infrastructure.

Reduced attack surface: Continuous assessment and remediation, CAASM helps organisations reduce their attack surface by eliminating unnecessary or outdated assets, services or configurations that could be exploited by attackers.

IOT & Non Corporate Discovery: Our CAASM capability can identify all devices, whether corporate or non-corporate, that connect to your network. This ensures that there are no hidden devices that could potentially breach your network security.

Strengthened Business Continuity: By proactively managing vulnerabilities and potential attack vectors, organisations can enhance their resilience and maintain business continuity, even in the face of cyber threats.

Start your journey to maturity by understanding your assets. Find out more
