# Continuous Controls Monitoring (CCM) or Continuous Compliance Automation (CCA)

The differences between CCA and CCM are minimal. CCM monitors control effectiveness and can also manage real-time compliance, making it useful for both cyber security and compliance.

QUOD ORBIS

## Other Cyber Security Solutions

Zero Trust Architecture, Advanced Threat Detection and Encryption and data masking are all essential tools in the finance institutions armoury.

## Artificial Intelligence (AI)

CCM actually uses AI, but AI can be utilised for predictive analysis and fraud detection.

## Identity and Access Management (IAM)

Multi-factor Authentication and User Behaviour Analytics means that multiple processes have to be completed to access sensitive areas and UBA can monitor behaviours effectively.
